

THE VOIX VIVE 12M BIBLE

Executive Summary — The Future of Somatic Music Education

The Vision: You Are an Instrument Playing an Instrument

Voix Vive is not a traditional online guitar course; it is an **Isomorphic Pedagogical Engine**. We treat the guitarist as a resonant node within a living system. By mapping the 12 intervals of the chromatic scale to 12 archetypal human somatic states (breath, emotion, tension), we teach students to tune not just their guitar, but their own nervous system.

1. The Curriculum: The 12-Fret Monomyth

The curriculum is built as a 144-node Directed Acyclic Graph (DAG), unlocking one fret per month to enforce "Slow Web" contemplative learning. Each fret requires passing three Somatic Gates:

- **BE (Presence):** Biofeedback checks (breath and posture) to ensure somatic readiness before playing.
- **DO (Fidelity):** Real-time pitch matching and ear training without visual crutches.
- **PLAY (Expression):** Open-ended improvisation and video capstone submissions. *A student cannot advance until the AI verifies they have released physical tension and matched the pitch perfectly.*

2. The Tech: Screen-Off, Audio-First

Voix Vive differentiation forms a deep architectural moat:

- **The Resonant Mirror:** Real-time Pythagorean ratio pitch-shifting of the user's voice to match guitar frequencies, proving intervals somatically.
- **Biometric Gating:** The AI Troubadour monitors tension levels (via webcam/mic) and pauses practice if the student is frustrated or tense.
- **Local-First & Offline:** Powered by WebLLM and IndexedDB, the "Living Brain" AI runs entirely on the student's device for total data sovereignty.

3. The Business Model: Information is Free, Transformation is Priced

The academy rejects disposable subscription economics. Instead, we use a **Freemium + High-Touch Mentorship** funnel:

- **Free Tier (Information):** Full access to the AI Troubadour, 12-fret curriculum, and pitch-room mechanics. Scales infinitely with zero marginal cost.
- **Paid Tiers (Transformation):** Human mentorship from Bertrand Laurence.
 - \$5: Quick Text Questions (Async)
 - \$35 - \$45: Detailed Video Review & Journal Prompting (Async)
 - \$65: Live 60-minute Zoom Ritual (Sync)
 - \$100: Capstone Audition Review (Sync)

4. The Mentor SLA: Scaling the Unscalable

Mentorship is asynchronous-first to protect cognitive load. The Mentor Dashboard hard-caps at 10 pending video reviews, enforcing a 7-day turnaround Service Level Agreement (SLA). This transforms unpredictable demand into a bounded flow, protecting the mentor's time while guaranteeing deeply personalized, high-value feedback.

The Verdict

Voix Vive is an anti-fragile, highly defensible IP that merges Web Audio APIs, AI LLMs, and Somatic Biofeedback. It serves the *serious beginner*, creating an ecosystem where technology acts not as a distraction, but as a vessel for human flourishing.
